Bibliografía de Programación del lado del servidor

Raúl Peña-Ortiz, raul.penya@uv.es

19 de octubre de 2026

Resumen

Documento de trabajo de la bibliografía usada para **django** en la asignatura Programación del lado del servidor (44825) del Máster oficial en Tecnologías Web, Computación en la Nube y Aplicaciones Móviles de la Escola Tècnica Superior d'Enginyeria, Universitat de València.

Limerick, Ireland: Association for Computing Machinery, jun. de 2000, págs. 407-416. ISBN: 1581132069. DOI: 10.1145/337180.337228.

Anot.: Publicación en congreso de los primeros resultados de la tesis doctoral del primer autor (**Fielding:phdthesis-2000**).

Archivo: pdfs/Fielding:ICSE-2000.pdf.

Fielding:ACMTIT-2002

Roy Thomas Fielding y Richard N. Taylor. «Principled Design of the Modern Web Architecture». En: *ACM Transactions on Internet Technology* 2.2 (mayo de 2002), págs. 115-150. ISSN: 1533-5399. DOI: 10.1145/514183.514185.

Anot.: Publicación en revista, que extiende (**Fielding:ICSE-2000**), de los resultados de la tesis doctoral del primer autor (**Fielding:phdthesis-2000**).

Resumen: The World Wide Web has succeeded in large part because its software architecture has been designed to meet the needs of an Internet-scale distributed hypermedia application. The modern Web architecture emphasizes scalability of component interactions, generality of interfaces, independent deployment of components, and intermediary components to reduce interaction latency, enforce security, and encapsulate legacy systems. In this article we introduce the Representational State Transfer (REST) architectural style, developed as an abstract model of the Web architecture and used to guide our redesign and definition of the Hypertext Transfer Protocol and Uniform Resource Identifiers. We describe the software engineering principles guiding REST and the interaction constraints chosen to retain those principles, contrasting them to the constraints of other architectural styles. We then compare the abstract model to the currently deployed Web architecture in order to elicit mismatches between the existing protocols and the applications they are intended to support.
